

Matriz de Extracción de Artículos Científicos

Información general del estudiante (ejemplo)

- **Nombre del estudiante:** Francis Josue Valdiviezo Jimenez
- **Técnica de IA:** Clustering jerárquico
- **Pregunta de investigación:** ¿Cómo se aplica el clustering jerárquico en análisis de datos?

Palabras claves extraida

- Clusting jerarquico -> Hierarchical Clustering
- Analisis de datos -> Data Analysis | Data Mining
- Metodo Clustering -> Clustering Algorithm | Clustering Method

Script (“Hierarchial Clustering” OR “Clustering Algorithm”) AND (“Data Analysis” OR “Data Mining”)

Abstract:
Internet of Things (IoT) devices are constantly producing vast amounts of data, necessitating efficient storage and processing to extract useful information. However, the models used to extract relevant information from IoT data are often hindered by the lack of useful data and the ever-changing distribution of this data. This paper introduces an incremental data clustering technique on a continuous stream of data through a Dirichlet process-based approach that is adept at handling the formation of clusters in streaming data. The complete approach is twofold; firstly, it starts with an estimated distribution of data and allocates its incoming data point to the estimated data distribution. Secondly, it refines the estimated data distribution after the allocation.

Abstract:
Energy Efficient Hierarchical Clustering (EEHC) method is a distributed random clustering algorithm for residential wireless sensor networks (RWSNs) with the goal of maximizing network lifetime. However, during selection of the cluster head stage, a node declares itself as a cluster head to neighboring nodes with probability p , which does not consider well the topological characteristics of the network. The new energy-efficient hierarchical clustering approach based on neighbor rotation (EEHCN) for RWSN has been proposed in this paper, the new idea of which determines whether a node of RWSN can become a cluster head node by comparing the comprehensive weight of the degree of the sensor node and the distance between the sensor
